★ ACTUAL VICTIM TESTIMONIAL ★

“ Had it been my grandmother or one of my nieces and nephews who happened to use the toilet that day, the consequences could have been severe. I required dozens of stitches for an extremely deep wound because of the exploding porcelain. ”

WHY IS THIS HAPPENING?

Toilets are exploding because of a flush assist system, by Flushmate, installed in the toilet's tank. The Flushmate was designed to save water and actually pushes the water down the drain instead of "pulling" like a normal gravity toilet.

The problem can occur when the pressure becomes so great that the unit **BURSTS**. The unit usually bursts at or near the weld seam, releasing stored pressure, which can shatter the tank.

HOW TO IDENTIFY AND FIX

LIFT THE TANK LID, IF YOU HAVE A **SERIES 503 FLUSHMATE III PRESSURE ASSIST** FIND THE LABEL BELOW.

IF THE DATE ON YOUR LABEL IS BETWEEN **★ OCT 14, 1997 → FEB 29, 2008 ★** YOU APPLY FOR A RECALL! FOLLOW THE INSTRUCTIONS BELOW
